## BOHEMI STARTIN S

### DESCRIPTION

Monobutyltintrichloride ( MBTCI3)

### CHARACTERISTICS

Parameters	Specifications
Appearance	Amber color liquid
Stannic content	41,0 % min
MBTCI content	99,0 % min
DBTCI content	0,3 % max
Water	0,01 % max
Chlorine	36,0 % max

### PROPERTIES

Forms a treatment of stannic oxide on the outer surface of the glass containers.

The stannic oxide reduces the risk of cracking the containers. It favors the anchorage of the cold treatment.

With Startin S the distribution of stannic oxide on the surface is more homogenous than with other stannic salts.

### APPLICATION

It is applied with an specific hood and metering pump.

### STORAGE

In hermetically sealed drums. At room temperature. Avoid contact with water or moisture.

Do not use open drums. Clean pumps and tubes with alcohol

In the original and tightly packed MBTCI3 it lasts for 6 months without altering the quality.

### PACKAGING

Iron drums with an interior polythene drum for maximum safety.

### SAFETY

May irritate and corrode skin. Do not breathe vapors.

Always wear protective clothing that is resistant to acids.

Consult the emergency card.

Bohemi Chemicals is certified ISO 9001: 2008.  
TUV NORD CERT: for the supply of chemicals and related after-sales services and for use in hot and cold treatment in glass processing
